Claims

5

25

1. Silanised, structurally modified silicas, characterised by vinyl groups or vinyl silyl groups fixed to the surface, hydrophobic groups such as trimethyl silyl and/or dimethyl silyl and/or monomethyl silyl additionally being fixed to the surface, having the

BET surface area m^2/g : 25 - 400

following physico-chemical properties:

10 Average primary

particle size nm: 5 - 50 pH: 3-10 Carbon content %: 0.1-10

DBP value %: < 200 or not determinable

- 2. Process for producing the silanised, structurally modified silicas according to claim 1, characterised in that silicas are treated with a surface-modifying agent, the mixture obtained is heat treated and then structurally modified.
 - 3. Process for producing the silanised, structurally modified silicas according to claim 2, characterised in that the silicas are sprayed first with water and then with the surface-modifying agent, optionally mixed further, then heat treated and then structurally modified.
 - 4. Process for producing the silanised, structurally modified silica according to claim 2, characterised in that
- the silica is treated with the surface-modifying agent in vapour form, the mixture is heat treated and then structurally modified.

WO 2005/095525 PCT/EP2005/001229

- 5. Process for producing the silanised, structurally modified silica according to claim 3, characterised in that the structurally modified silica is post-ground and/or conditioned.
- 6. Process for producing the silanised, structurally modified silica according to claim 4, characterised in that the structurally modified silica is post-ground and/or conditioned.
- 7. Use of the silanised, structurally modified silica according to claim 1 as a filler in silicone rubber.
